Wednesday, May 17, 2011 Yesterday, we held our first meet-up for the 2011-2012 academic year! We decided that we would meet every other week at a different location, starting out in Wal-Mart. A great time to connect with people, do lunch and to meet some new people too! We had some questions from people about cost, so we decided to make a mini-poster to let everyone know. Here are a few pictures of what we'll be posting around campus this week! The first one is a picture of the Wal-Mart we will be meeting in from now until July. Upcoming Meet-Ups The next one is from the April 8th meet-up, and is a picture of the Wal-Mart Food Court. The next one is the picture of the Wal-Mart we will be meeting in in May. And the last one will be the June 9th meet-up, and is the picture of the Wal-Mart Food Court. Here's What We Started We started with our head-count, and we currently have 25 people signed up to join and meet at Wal-Mart on Saturday, May 21st. I hope that a few new faces will be there too. We decided that the first thing we would start is making a price guide, so people would know how much food to expect to eat. This would allow us to cover all the food that will be available for the day. Then, after lunch, we will have a show-and-tell for all the various things that we have done so far on campus this year. We started a Facebook page as well, so we can keep in touch with each other even after the first meet-up!Q: What happened to an academic assistant professor who was denied tenure? I recently heard about a professor who was denied tenure (or another words was not offered a position for next year). Some aspects of the story were somewhat surprising: the professor was recently graduated from Ph.D. program (during which he/she published lots of papers in high-impact journals) it was quite well known among the department faculty (I heard it from both the professor and the department chair; another professor who was not involved in this process confirmed it) the professor's position as a research assistant professor was quite undesirable. This was evidenced by the fact that the professor was not offered a position at department conferences after

[Blood rheology]. The following topics are discussed in relation to Rheology: 1) Rheological models. The solution of rheological flows near and far from equilibrium is based on the concept of viscosity on the one hand and on the concepts of complex fluids and of Brownian motion on the other hand. The various versions of the Maxwell model, of the Rautian model, and of their combinations are presented. The viscosity is given by the values of the frequency dependent shear modulus G and of the relaxation times. The frequency G can be calculated in the case of Newtonian fluids. The generalization to other fluids may be done by the use of the relaxation time, which is a function of the density of the fluid and of the relaxation mechanisms. On the other hand, Brownian motion is the main source of internal friction of fluids. However, there exists a serious limitation because the short time dependence of viscosity can not be reproduced by the three mode relaxation model used to describe Brownian motion. In order to deal with this limitation, another model has been proposed by the new relaxation modes and the complex fluids theory. This model may be called the Unified model. The description of Brownian motion and of mechanical relaxation is developed on the basis of the unified model. The concept of complex fluids is also reviewed. 2) Rheological behavior of blood. A remark is made on the role of viscoelasticity and then on the pulsatile flow in the heart. 3) The characteristics of the different methods for investigating the rheological properties of blood.Q: Vector Calculus - Proof of Identity question I'm currently studying the Chain Rule and the Product rule on the Discriminant (Theorem 1.1) and I came across the following identity: $\partial_i (\phi \cdot u) = (\partial_i \phi) \cdot u + \phi \cdot (\partial_i u)$, where ∂_i denotes the partial derivative with respect to the ith argument of the function, f, ϕ is any real function, and u is any vector field. My question is: why does u show up in the right-hand side? In my text it is stated that in order to get the right hand side, the indices i, j of the partial derivative must be contracted.
